

## COMVERSE

It was December 22, 2005 when **AEI** FASTLINKS was asked to provide and install a GigE wireless link between Comverse's sites in Mt. Laurel, NJ. They were expanding into a new facility and needed it done by no later than January 6, 2006. The link, mounts and cables were delivered by December 31<sup>st</sup> and the link operational by January 5<sup>th</sup>. The only holdup in getting the job done was the holidays. In addition to installing a "new" 60GHz GigE radio link, we also re-installed an existing Ethernet + T1 channel radio link.

### The Wireless WAN Pros!

*FYI –Chances are you've experienced the Comverse product if you've ever used voicemail on your home or mobile telephone. They lead the industry in offering the most advanced enhanced services for wireless, wireline, and broadband including short messaging services, multimedia messaging, instant communications etc..*
