Getty Images, with headquarters in Seattle, WA and offices worldwide, had a problem. The 45Mbps leased line circuit between its offices in Manhattan was becoming unreliable, and it was impacting its bottomline. They turned to **AEI FASTLINKS**, who recommended and installed a GigE circuit (1000Mbps, full duplex) wireless link for less than what they were spending per year for the leased line connection. More bandwidth, for less money, what a great solution!

The Wireless WAN Pros!

FYI – Getty Images was founded in 1995 and it was the 1st company to license imagery via the web. It serves an average of 2.3 million unique visitors each month with over 2.3 billion thumbnails and 161 page views. Nearly 100% of the company's visual content is delivered digitally.
