

## Northland, A Church Distributed – Longwood & Ocoee, FL

The Northland Church Group had **AEI** design & implement a redundant, 10/100BaseT + T1 channel wireless link between their sites. The wireless link allows the Church to share what's going on at each site during times of worship via video/audio steaming. The wireless connection proved to be a more cost effective solution versus leasing six T1 channels from the local Telco; the minimum bandwidth needed for a quality, multi-stream video/audio transmission.
