

Application Profile: Palm Springs Unified School District

The Palm Springs USD had a problem. The vendor it had contracted to install a wireless WAN throughout its district could not guarantee it would be operational before the start of the school year. It turned to **AEI FASTLINKS** to; 1) do a sanity check on its WAN design, 2) determine what hardware was needed to complete the installation, 3) check to make sure all FCC paperwork had been filed, 4) make recommendations for improvements and upgrades, and 5) help facilitate a successful installation.

The Wireless WAN Pros!

FYI – As of 2004, PSUSD had fourteen elementary schools, four middle schools, three comprehensive high schools, one continuation high school, one independent study program, eight headstart/state preschools, three full-day headstart programs, four childcare programs, and an extensive adult education program.
