

Application Profile: Ridgefield Bank – Ridgefield, CT

AEI FASTLINKS was chosen by The Ridgefield Bank in CT to design and provide a wireless system capable to supporting both a 10BaseT and T1 channel (for voice) between their facilities. The wireless link replaced a costly T1 leased line (\$500/month) that was being used to support both their data and voice traffic. By implementing the wireless link, they were able to increase the capacity for their LAN traffic ten-fold while also doubling the number of voice circuits between their sites.

The Wireless WAN Pros!

FYI – Ridgefield Bank is over 130 years old, and at the time of its organization in 1871, Ulysses S. Grant was President of the United States.
