

Application Profile: U.S. Treasury Department –Bureau of Public Debt

AEI FASTLINKS was chosen by UNISYS and The Bureau of Public Debt to evaluate the feasibility of replacing the costly T-3 and T-1 circuits it was operating between 4 of 5 of its facilities in Parkersburg, WV. The results of the feasibility study showed that by implementing a wireless WAN, the Bureau would not only be able to save a significant amount of money, but also increase the bandwidth of its data communication channels. Following a review of the study, **AEI** was contracted to install three 100Mbps Fast Ethernet + 2T1 channel radio links between the Bureau's main facility and three remote sites (HJ Hingten Building, Park Center Facility, and the United Bank Building).

The Wireless WAN Pros!

FYI - The mission of the Bureau of Public Debt is to borrow money needed to operate the Federal Government and to account for the resulting public debt. This mission is accomplished by selling securities (e.g. savings bonds, marketable securities), and maintaining accounts of such transactions.
